

Title: Healthcare Engagement Across Malaysia
 Author: Joshua Ethan Yap Bing You
 Date: 11/09/2024
 Sheet: Sheet 1, Brainstorm
 Task: Brainstorming

1. Ideas

② Proportional Symbol Map

③ Stacked Bar Chart

④ Correlation Line Chart

⑤ Heatmap

⑥ Stacked Area Chart

⑦ Bin Map

⑧ Interactive Time Slider

⑨ Tooltips

⑩ Filter By State

⑪ Pie Chart

① Choropleth Map

2. Filter

① Choropleth Map

② Proportional Symbol Map

③ Bin Map

Filter and choose 1 map

④ Interactive Time Slider

④ Tooltips

⑩ Filter By State

Combined as interaction for graphs

③ Stacked Bar Chart

⑥ Stacked Area Chart

for grouped categories

3. Categorise

① Geographical Visualisation

Choropleth Map
 Proportional Symbol Map
 Bin Map

② Time-based

Correlation Line Chart
 Heatmap
 Annotated Chart

③ Group-based

Stacked Bar Chart
 Stacked Area Chart

4. Combine & Refine

- blood type categories over time

- uses normalised data

- time slider

- allow users to switch between different healthcare services.

- correlation chart to show how different categories change over time

- time slider

5. Question

1. Does this provide insights into healthcare engagement across Malaysia?

2. Does this show trends/correlations between different categories?

Date: 11/09/2024

Sheet 2

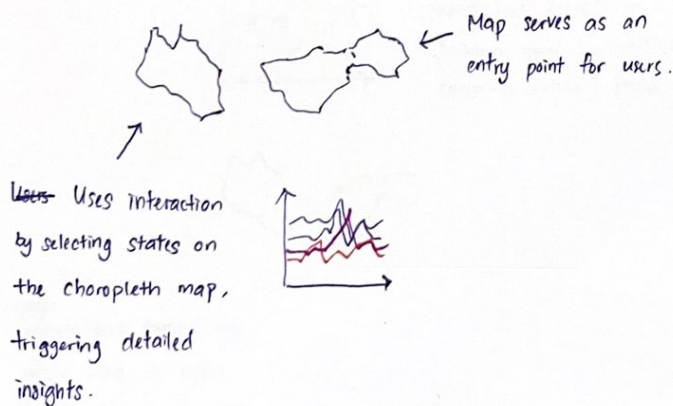

Task: Geographical Focus with Layered Insights

Operations

- State-based colour coding for healthcare metrics, updated via toggle options.
- time slider allows display of healthcare engagement over different time periods.
- hovering over different states displays information for detailed stats.

Focus

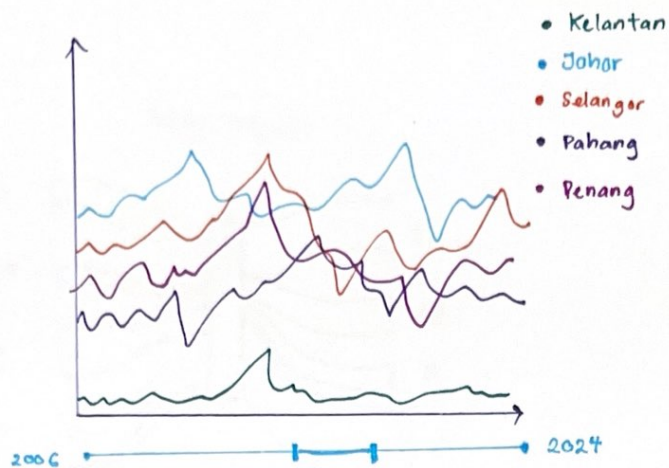

- Geographical Layered Exploration

Discussion

- + map-first exploration
- + layered details
- + time-sensitive insights
- too map-dependent, users might overlook other metrics without clicking through states.

Layout

Proportional Symbol Map

Sheet 3

Task: Temporal & Correlation Focus

Operations

- show national and state-based time series trends for healthcare services.
- hovering over chart points displays exact data values at each point of time.
- adjusting the time slider changes the data displayed across the visualisations.

Focus

Time-Centric Correlation Analysis

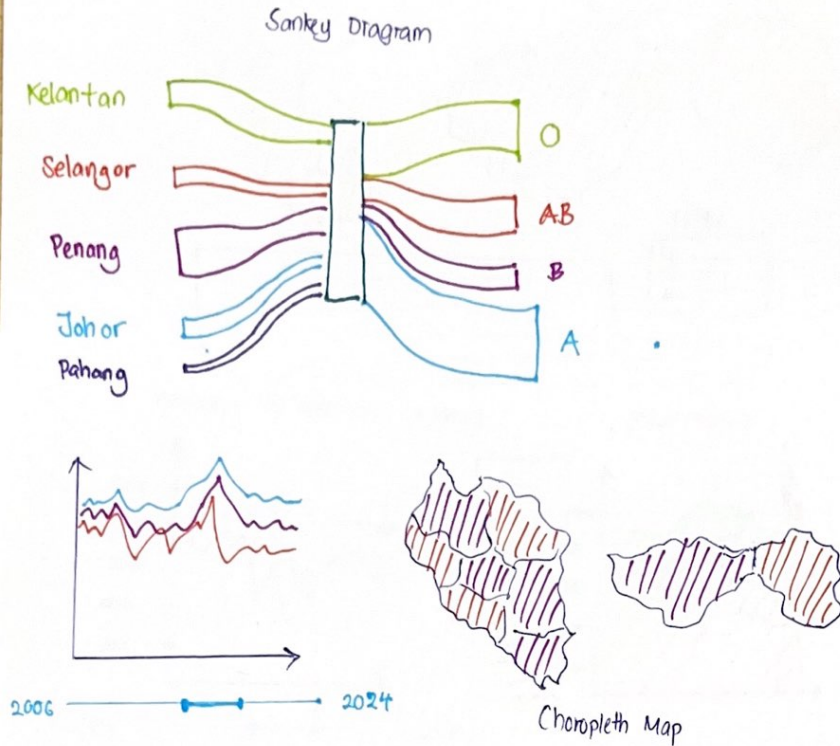

proportional symbol map allows users to select specific states, but the primary interaction revolves around time and correlations.

focus is time-first with the primary focus on understanding trends and correlations between healthcare services, comparing different states.

Discussion

- + time-first approach: users focus on trends and correlations.
- + immediate comparison between healthcare engagement with different states
- map isn't the central point of interaction, reducing its impact.

Date: 11/09/2024

Sheet 4

Task: Flow & Distribution of
Healthcare Contributions in
Malaysia

Operations

- hovering over the Sankey diagram flow lines displays detailed information about the volume of donations from a specific state to a blood type.
- selecting a state on the map updates the Sankey diagram to reflect the selected region.

Focus

Healthcare Distribution and Flow

main interaction is through the Sankey diagram, providing a view on how blood donations move from different states to various blood types

understanding how healthcare contributions are distributed across Malaysia.

Supplementary visuals to give more context to the flow of donations over time.

Discussion

- + Sankey diagram is visually compelling, allowing users to immediately grasp distribution patterns
- + flow-based analysis
- sankey diagram may be too complex for some users
- map isn't the central point of interaction, reducing its impact.

HEALTHCARE ENGAGEMENT IN MALAYSIA

Sheet 5

Task: Geographical Focus with Layered Insights.

- hovering over a state displays a tooltip, showing detailed numbers for that state
- clicking on a state filters the line graphs below.
- users can filter between 3 healthcare engagements: blood donation, organ donation pledges, PeKaB4D health screenings.
- adjusting the time sliders updates the line charts for the selected time period.

LAYOUT	OPERATIONS
FOCUS	DETAIL

user starts with map to identify geographical differences in healthcare participation across Malaysia

text boxes provide a narrative and a story.

filter between services allows quick comparison

additional insights through line charts and stacked area charts provide temporal analysis.

- Implemented using Vega-Lite
- utilise the Pure-css library.
- data will be sourced from Malaysia's open data portal (dataset in CSV format)
- takes about 1-2 weeks to build the Vega-Lite dashboard.
- uploaded via GitHub links.
- data is to be normalised before displaying to the map.
- GeoJSON/ TopoJSON format for rendering the map of Malaysia.
